

# Conventional V's The Claw

Conventional drivers, though square to the ball at address, often return to the ball at impact open (due to slight flaws in the golf swing), thus causing a glancing blow and loss of power.

The result is a weak shot often ending up in the right rough or worse.

The Claw's unique face angle alleviates this problem giving straighter and more consistent shots.

The Claw Driver has a unique weighting system and is heavier than most conventional drivers. This minimises the risk of thrashing at the ball (hitting from the top) and encourages a more natural inside swing path.

The Claw's unique face prevents two problems which can arise when using a conventional driver; first, hitting underneath the ball (skying) and secondly, hitting the ball on the top (topping), these both result in a weak shot and loss of distance.

## Who We Are

The Claw Driver is unique by design

If you find getting off the tee your major handicap, then it's time for a change.

We, at the Natural Golf Company, are sure that the Claw Driver will help alleviate some of those blues.

We haven't just made the head bigger, we've designed something new!

Ask your Pro for a demonstration of the Claw Driver, you'll be amazed.
