

Introducing the Claw Driver

The Claw Driver is designed like no other driver. Its unique face setting and weighting system mimics the natural position of the body at address. Unlike conventional drivers it is virtually slice free and cannot 'sky' the ball. The Claw enables the golfer to have a very powerfull downswing, like that of a lumberjack axing down a tree. Because of this more natural downswing it could prevent muscle and back problems caused by the awkward swinging of conventional drivers. The combination of swingpath, body, and wrist angle, will enable you to hit the ball more powerfully, more solidly, more consistently, more naturally!

Driver ANATOMY

Head

The head and shaft have been designed together - compliment and enhance each others benefits and effects;

- Body Titanium
- Face BETA Titanium
- Unique face and lie angle provide calculated launch angle

- ### Grip
- Grip Mid Size All Weather Velvet Feel

Specially designed shaft providing maximum distance and control

Shaft

- 3 Degree Torque
- 0.350 Tip
- 2 Flex Options - C200, C300
- Mirror finished PVD Coating

Head Cover

- Cutting edge faux suede head cover
- Graphite friendly magnetic fastener
